\*Teen birth rate is per 1,000 females age 15-19 years. \*\*The number of teen births and the teen female population for 3 years (2008-2010) were combined to produce more stable rates. County rates were tested for statistical significance against the state rate after subtracting the county's contribution to the rate. County rates not statistically significantly different from the remaining state rate include Inyo, Lassen, Mendocino, Modoc, Plumas, Sacramento, Santa Cruz, Shasta, Siskiyou, Sutter, Trinity, and Ventura. Stable rates could not be computed for Alpine and Sierra (fewer than 20 births).
